

Knowledge Transfer Package

Absence simulated: Sneha, Karan

Generated: 2026-08-27 00:50 UTC

2 of 5 capabilities fall to LOW or NONE without Sneha, Karan. The documentation for each one follows.

Capabilities Requiring Transfer

Capability	Before	After	Score	Documents
Database Recovery (C003)	HIGH	NONE	0.00	2
Deployment & Rollback (C005)	HIGH	LOW	0.26	5

Database Recovery

NONE — coverage fell from HIGH (1.00) to NONE (0.00). No remaining coverage.

Recovering databases and restoring data availability after failures, corruption, or incidents.

Supporting Documentation

1. PCI-DSS Primary Account Number Sanitizer & Audit Policy

Matched by keyword match — matched terms: data, primary

Space: ACMEPAY

Matched: data, primary

Document Metadata & Technical Provenance
Module Component: compliance-service Authors: Deepa Raman (E09), Keyuri Sheth (E02)
Historical Effective Period: 2023-08-04 to 2026-08-19
Correlated GitHub Artifacts: Services/compliance/pci_sanitizer.go, data_retention.go
Correlated Jira Epics & Issues: Epic SCRUM-17, SCRUM-68, SCRUM-92

Compliance & PCI-DSS Data Sanitizer Policy

Matched: data, primary

The compliance-service enforces PCI-DSS credit card number masking (6-to-4 PAN sanitization), data retention log purging, and audit logging.
--

Technical Components

services/compliance/pci_sanitizer.go: Primary Account Number (PAN) masking logic.
services/compliance/data_retention.go: Purges expired audit logs past retention cutoff dates.
services/compliance/audit_logger.go: Immutable compliance audit event logger.

2. Double-Entry Journal Bookkeeping & Balance Matching

Matched by keyword match — matched terms: data, primary, transaction

Space: ACMEPAY

Document Metadata & Technical Provenance
Module Component: ledger-service Authors: Rohan Gupta (E10 - Principal Ledger SME)
Historical Effective Period: 2023-03-10 to 2026-08-02
Correlated GitHub Artifacts: Commit 6908df2, 33f6995 (services/ledger/balance_verifier.go, journal_entry.go)
Correlated Jira Epics & Issues: Epic SCRUM-9, SCRUM-18..31, SCRUM-82..84

Double-Entry Ledger Architecture Specification

The ledger-service maintains immutable financial accounting books. Every transaction requires equal debit and credit journal entries to satisfy double-entry balance verification.
--

Domain Ownership & Core Components

Matched: data, primary, transaction

Lead architect and primary SME for ledger balance matching is Rohan Gupta (E10), maintaining 84% of ledger engineering tickets and 57% of ledger code commits.
services/ledger/journal_entry.go: Debit and Credit entry data structures.
services/ledger/balance_verifier.go: Verifies debits equal credits before posting.
services/ledger/double_entry.go: Atomic transaction posting engine.

[Open in Confluence](#)

Deployment & Rollback

LOW — coverage fell from HIGH (1.00) to LOW (0.26). Strongest remaining: Amit.

Deploying software changes safely and rolling back releases when deployment issues occur.

Supporting Documentation

1. [Kubernetes ArgoRollout Canary Deployment Runbook](#)

Matched by keyword match — matched terms: automated, canary, ci/cd, deployment, github, helm, issues, kubernetes, releases, trigger

Space: ACMEPAY

Matched: canary, deployment, github, issues, kubernetes

Document Metadata & Technical Provenance
Module Component: deployment-service Authors: Kshitij Naidu (E03), Parth More (E06), Meera Patel (E11)
Historical Effective Period: 2023-04-25 to 2026-08-18
Correlated GitHub Artifacts: Commit 889d323, 022881d (deployments/k8s/canary_rollout.yaml, helm/)
Correlated Jira Epics & Issues: Epic SCRUM-15, SCRUM-62, SCRUM-91

Deployment Service & Canary Rollout Runbook

Matched: automated, canary, ci/cd, deployment, helm, kubernetes, releases

The deployment-service manages Kubernetes ArgoRollout canary releases (10%/50% traffic steps), Helm values, and automated CI/CD build workflows.
--

Technical Components

Matched: canary, deployment, kubernetes, trigger

deployments/k8s/canary_rollout.yaml: ArgoRollout progressive delivery specification.
deployments/helm/payment-service/values.yaml: Kubernetes replica and resource parameters.
.github/workflows/deploy_production.yml: Production deployment workflow trigger.

2. Real-Time Risk Evaluator & Fraud ML Pipeline Spec

Matched by keyword match — matched terms: evaluation, github, issues, pipeline

Space: ACMEPAY

Matched: github, issues, pipeline

Document Metadata & Technical Provenance
Module Component: fraud-service Authors: Aditya Verma (E14), Krish Trivedi (E04)
Historical Effective Period: 2023-04-18 to 2026-06-22
Correlated GitHub Artifacts: Commit a3a2fda (services/fraud/risk_evaluator.py, velocity_checker.py)
Correlated Jira Epics & Issues: Epic SCRUM-7, SCRUM-53, SCRUM-78

Fraud Detection & Risk Evaluator Specification

The fraud-service calculates real-time risk scores between 0.0 and 1.0 based on card transaction velocity, high-amount thresholds, and IP subnet blacklists.
--

Technical Components

Matched: evaluation, pipeline

services/fraud/risk_evaluator.py: Real-time risk evaluation engine.
services/fraud/velocity_checker.py: Sliding 60-second window transaction frequency limiter.
services/fraud/blacklist_filter.py: Compromised card token and suspicious IP subnet filter.

3. Acmepay engineering Home

Matched by keyword match — matched terms: acmepay, check, when

Space: ACMEPAY

Welcome to your new space!

Spaces help your team structure, organize, and share work, so every team member has visibility into institutional knowledge and access to the information they need to do their best work.

4. **Merchant KYC Onboarding & Profile Controller Spec**

Matched by keyword match — matched terms: *controller, github, issues*

Space: *ACMEPAY*

Matched: *controller, github, issues*

Document Metadata & Technical Provenance

Module Component: user-service | Authors: Keyuri Sheth (E02), Ananya Sharma (E07), Pooja Bhatia (E17 - Doc Author)

Historical Effective Period: 2023-05-19 to 2026-08-14

Correlated GitHub Artifacts: *Services/user/merchant_profile.go, kyc_verifier.go*

Correlated Jira Epics & Issues: *Epic SCRUM-11, SCRUM-48, SCRUM-66*

Merchant User Service & KYC Verification Spec

The user-service manages merchant onboarding, profile registrations, and automated tax ID KYC document verification.

Documentation & Engineering Contributors

Technical architecture specifications authored by Pooja Bhatia (E17). Core implementation and KYC verification logic developed by Keyuri Sheth (E02) and Ananya Sharma (E07).

services/user/merchant_profile.go: Merchant profile model and onboarding parameters.

services/user/kyc_verifier.go: Tax ID KYC validation worker.

5. **Prometheus Alerting & Grafana Latency Dashboard Spec**

Matched by keyword match — matched terms: *github, issues, prometheus*

Space: *ACMEPAY*

Matched: *github, issues, prometheus*

Document Metadata & Technical Provenance

Module Component: monitoring-service | Authors: Kshitij Naidu (E03), Parth More (E06), Tanvi Deshmukh (E13), Varun Saxena (E18)

Historical Effective Period: 2023-03-28 to 2026-08-16

Correlated GitHub Artifacts: *Monitoring/prometheus/payment_alerts.yml, grafana/dashboards/latency.json*

Correlated Jira Epics & Issues: Epic SCRUM-16, SCRUM-60, SCRUM-90

Monitoring & Observability Specification

The monitoring-service configures Prometheus alert rules for p99 latency spikes, Grafana response dashboards, and PagerDuty alert escalation rules.

Technical Components

monitoring/prometheus/payment_alerts.yml: Prometheus alert rules for HighPaymentFailureRate and HighP99Latency.

monitoring/grafana/dashboards/latency.json: Grafana latency and throughput dashboard.

monitoring/pagerduty/routing_rules.json: SEV-1 incident on-call escalation policies.

How This Package Was Produced

Coverage figures come from the evidence-scoring engine (evidence mass with 2-year recency half-life, noisy-OR aggregation). Capabilities scoring LOW or NONE after the simulated absence are treated as documentation requirements.

Documentation was retrieved from 14 Confluence page(s) / 41 section(s) by exact metadata match (label, parent page, or space) and by keyword search using terminology drawn from each capability's own historical evidence.

All quoted material is copied verbatim from the linked Confluence pages. No content in this document was generated or paraphrased by a language model.
